

Admin Login:

UserID - admin

Password - @dmin123!

Assumptions:

Each family registering has an email address and all the necessary information to register

A family will only register once and will not click "new user" after successfully creating a profile

Codes written on business cards would be created in the system first so that any cards being handed out are already in the text file

More time allotted assumptions:

Prize page would have images of prizes to be won with the option to select that prize below the image (will subtract the amount of entries it takes to enter from the user's total)

Admin page would be shown after logging in with admin credentials, and would be a JavaFX page that allows the admin to add, edit, and delete existing entry codes

Modification of entry codes by admin would be made functional with file input, file reading, and file output to the CSV files (data readers and writers)

All CSV files would be transferred over to XML or JSON files
